In regards to GN Docket No. 25-133

Requesting removal of unnecessary regulatory restrictions on Licensed HAM Radio Operators to have access GMRS frequencies at elevated transmission levels without re-applying and paying additional fees.

Licensed HAM radio station operators already demonstrate due regard and adequate technical acumen, greater than the general public, and thereby should be permitted to use GMRS allocated frequencies at the 50W emission level without further unnecessary licensure. All GMRS operators, including already licensed amateur radio operators, should have access to these 460Mhz allocations without prejudice.

Furthermore, licensed amateur radio stations should be permitted to use their FCC-issued station ID on GMRS frequencies without the burden of maintaining a separate GMRS station ID.
